### **Les courbes de Lorenz des revenus imposables de la Suisse et des cantons**

(contribuables acquittant un impôt fédéral direct, cas normaux et spéciaux confondus)

La courbe de Lorenz des revenus imposables d'un canton indique la part y% de la masse totale des revenus imposables du canton (indiquée en ordonnée sur le graphique) générée par les x% de contribuables au plus faible revenu imposable dans ce canton (indiqués en abscisse sur le graphique). Le coefficient de Gini, double de la mesure de l'aire comprise entre la courbe de Lorenz et la ligne bissectrice, mesure la concentration des revenus imposables dans le canton; il varie entre 0 (tous les revenus égaux) et environ 1 (tous les revenus nuls sauf un).

Die Lorenzkurve der steuerbaren Einkommen eines Kantons zeigt den Anteil in Prozenten (y%) der Gesamtsumme der steuerbaren Einkommen eines Kantons (in der Graphik die y-Achse), der von x% der Steuerpflichtigen mit den tiefsten Einkommen generiert wird (in der Graphik die x-Achse). Der Gini-Koeffizient der Einkommen – graphisch die doppelte Fläche zwischen der Winkelhalbierenden und der Lorenzkurve – ist ein Indikator für die Konzentration der steuerbaren Einkommen in einem Kanton. Er variiert zwischen 0 (alle Einkommen sind gleich hoch) und annähernd 1 (alle Einkommen sind gleich Null, ausser eines).
